

Do you know?  
An organisation should conduct a safety audit at least once in two year

## Safety Audit

---

Safety by Design and Electrical Fire Investigation Techniques

### Introduction

A safety audit is a structured process whereby information is collected relating to the efficiency, effectiveness, and reliability of a company's total health and safety management system.

Safety audits serve two broad purposes:

1. They are routinely conducted in order to determine whether the company is in compliance with safety legislation. These can be performed by representatives of a regulatory body or by the company itself.
2. They are used to identify weaknesses in their safety programs and processes. These audits are then used as a guide for designing safety plans or to identify corrective actions that should be undertaken

### Steps to be followed:

- . Preparation
- . Conducting the audit
- . Reporting
- . Corrective and preventive actions

## Benefits

Regularly-occurring safety audits offer myriad benefits to organizations, as well as their employees, contractors, and customers:

- . Improved workforce safety
- . Fewer accidents, injuries, and illnesses
- . Lower workers' compensation costs
- . Fewer legal claims
- . Less regulatory uncertainty and compliance risk
- . Less turnover
- . Greater productivity

## Assessment Procedure

- Discussion with qualified site Team about the detailed planning, prior to Safety Audit.
- During the assessment, we met various employees, leaders, and various team members.
- Obtaining authorization and assessing all the areas of the plant site.
- Got an overview of dos and don'ts at site and PPE requirements.
- Verify the documentation in the field.
- Observing gap and Recommend as per National/International best practices.
- Recording date and the location of the area where safety issue involves.
- Element Scoring according to TheSafetyMaster™ criteria.
- Conducting closing meeting to give an overview of the gap observed during the audit.
- Submitting detailed action item based report

## Types of Safety Audit

These are the following audits which "TSM TheSafetyMaster Private Limited" do for the industries

- Process Safety Audit
- Electrical Safety Audit
- Statutory Safety Audit
- Office Safety Audit
- Transport Route Safety Audit
- Construction Site Safety Audit
- Sustainability Audit
- Industrial Hygiene Audit
- Environmental Management Audit
- Water Conservation Audit
- Road Safety Audit
- Energy Audit
- Warehouse Safety Audit
- Comprehensive Safety Audit

## Industry We Serve

The services which we are providing to the following industries are:-

- Automobile
- Chemical
- Electrical
- Engineering
- Food
- Glass
- Home Appliances
- Logistics & Warehouse
- Machinery
- Metal & Chemical Equipment
- Oil & energy
- Pharmaceutical
- Petrochemicals
- Steel
- Textile
